

P.A.I.N. / Presenter pocket map

AGE 18 | ENGLISH | 9 SEPTEMBER 2026 | COMPANION TO THE PRESENTER GUIDE

Voice	2-3 min	5-10 min	15-20 min
Museum: notice and explore	M1	M2	M3
Science: follow the evidence	S1	S2	S3
Artist: connect and reflect	A1	A2	A3

The invitation

Personal And Interconnected with Nature. Four layers invite a conversation about harm, dependence, and care. They do not form one validated score of suffering.

Read the image

- WORDS: model-selected distress category; chosen country language.
- SURFACE / DOTS: physical condition estimates; dots are rendering samples, not patients.
- ATMOSPHERE: temperature change and emissions; not measured smoke or exposure.
- YELLOW / HATCH: lower GDP per person gives stronger signal through an inverted logarithm.
- LINES: current Delaunay category network; geographic construction, not causal transmission.

Source numbers

Emotional: 249,438 analysed records; 192 countries; 84 language hints.

- CCNews 5,000; country-context tweets 166,837.
- DEMOTEC 67,193; Yachay 8,564; CFPB 1,030; CMU 814.
- Country score: 75% news mean + 25% expression mean where both exist.
- 93.84% of the news probe has recorded years 2015-2016.

Physical: 15,282 map records; six conditions, 2,547 each. Temperature: 8,100 points. Emissions: 2,339 points. GDP: 2024 current US dollars per person; 190 values, 16 missing roster entries.

Say it accurately

PEAK is not AVERAGE. MODEL SCORE is not POPULATION RATE. GDP is OUTPUT, not typical income. MISSING is not ZERO.

News country usually means PUBLISHER ORIGIN. The display chooses among 14 distress categories, excluding no-pain and out-of-scope. Filters can change the winner without changing scores. Gabriel uses an empty-diameter-ball test; the current exhibition uses Delaunay.

Story prompts

- INDIA (01, 18): physical peak 0.943; population placement; GDP versus per-person measure.
- JAPAN (03): back-pain peak; ask about age and the source measure before explaining why.
- RUSSIA / CANADA (08, 09): warming versus heat; local peak versus national mean.
- BURUNDI / LUXEMBOURG (15, 16): economic structure; output versus household experience.
- PALAU (21): one news row; uncertainty winner; low anger is not national calm.
- COMOROS (25): emotional data missing, GDP available; coverage differs by layer.

Three useful questions

What do we see? What produced it? What else would we need to know?

Before presenting

Start with all categories enabled. Do not interpret animation as history. Keep source-method gaps visible. Invite observation, not personal disclosure. Use the guide's source atlas, story evidence, glossary, and references for follow-up questions.

Use with age-18-presenter-guide.pdf. Story numbers refer to the guide; source details and limits are there.
